

Northeast Massachusetts Climatetech Consortium

June 2025

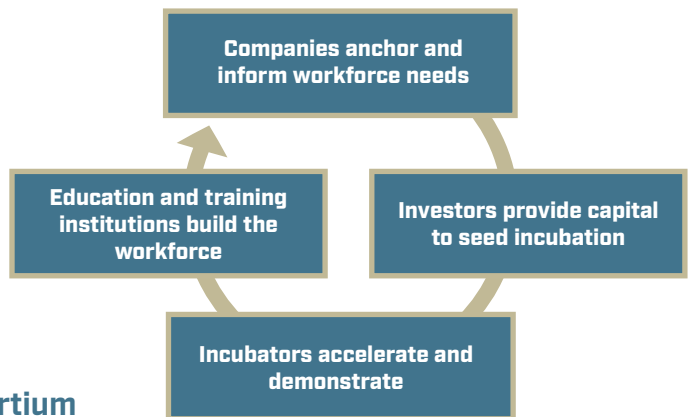

A Northeast Massachusetts public-private consortium leveraging regional strengths to increase equitable, sustainable, and innovative economic competitiveness

Over the next 10 years, Massachusetts will invest \$400M in Climatetech initiatives and a new tax incentive program administered by MassCEC. This is part of the MassLeads Act, a 10-year, \$1 billion strategy to “make Massachusetts the climate innovation lab for the world”.

Defining Climatetech

The Climatetech ecosystem includes a network of communities, businesses, training & education institutions, and nonprofits that innovate technology solutions to mitigate the impacts of climate change and help communities adapt and build resilience to climate change.

The Northeast Massachusetts Climatetech Consortium

Over 60 Northeast Massachusetts cross-sector leaders met in March, 2025 to learn about climatetech opportunities and identify early regional action items that include:

1. Develop broader regional connections.
2. Advance regional education & training models, responsive to worker and employer needs.
3. Create a regional strategy. Share the vision. Communicate the brand.
4. Innovate and demonstrate to show success and secure investment.
5. Address housing and transportation to attract and retain workers.
6. Incentivize climate-smart, resilient development strategies, new energy solutions, and sustainable land use strategies.
